SUMMARY

AWS Certified Cloud Practitioner and first-class Computer Science (Software Engineering) graduate with hands-on AWS experience from the AWS re/Start program and self-directed projects. Built a GitHub Actions CI/CD pipeline — tests, Docker builds, OIDC-authenticated deploys — for a multi-container app running on a live AWS EC2 instance behind Nginx. Comfortable with Linux, Git, Python and Bash scripting, and core cloud networking and security. Actively building Infrastructure-as-Code skills (Terraform, Kubernetes). Seeking a DevOps Trainee role to grow into cloud automation and platform engineering.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, S3, VPC, IAM, SSM), Docker, GitHub Actions CI/CD, Nginx, Linux

Scripting & Automation: Python, Bash, SQL, Java, PL/SQL

Networking & Security: TCP/IP, VPC, subnets, security groups, NACLs, load balancers, JWT auth, least-privilege IAM

Version Control: Git, GitHub

Development: REST APIs, FastAPI, pytest, Alembic migrations, PostgreSQL, Vue 3

Currently Learning: Terraform, Kubernetes

CERTIFICATIONS & TRAINING

AWS Certified Cloud Practitioner *Issued Aug 2026 · Valid through Aug 2029*
Amazon Web Services

AWS re/Start *Aug 2026*
Amazon Web Services

CS50: Introduction to Computer Science *Aug 2025*
HarvardX

PROJECTS

Xala — Containerized App on AWS EC2 with a CI/CD Pipeline

- Deployed a three-container stack (Vue 3 SPA behind Nginx, FastAPI backend, PostgreSQL) to a live AWS EC2 instance using Docker Compose, configuring security groups and Linux server access.
- Built a GitHub Actions pipeline: runs backend unit tests (pytest), builds and pushes Docker images to Docker Hub, then redeploys to EC2 via AWS SSM Run Command, authenticating through OIDC federation with a least-privilege IAM role instead of static credentials.
- Nginx reverse-proxies API traffic to the backend; Alembic migrations and Gemini-powered sales analytics are built into the underlying app.

AWS Multi-AZ High-Availability Architecture (Design)

- Designed a 3-tier, Multi-AZ architecture: custom VPC, public/private subnets, route tables, ALB, Auto Scaling Group, Aurora Multi-AZ, least-privilege IAM policies, and an automated backup strategy.
- Modeled a monthly cost breakdown (~$490) to weigh high availability against operating cost.

Automation & API Projects

- Diagram Exporter (Python workflow automation for manufacturing reports); CS50 Tools (FastAPI REST API + keyword search engine over educational video content).

WORK EXPERIENCE

Information Technology Intern, Noratel International *Mar 2025 – Sep 2025*
Katunayake, Sri Lanka

- Developed a Python desktop application to automate transformer design workflows, bridging manual data entry and database management.
- Automated generation of Excel-based manufacturing reports (design pages, timing sheets, BOMs), reducing manual data entry and processing time.

EDUCATION

BSc (Hons) Computer Science in Software Engineering — First Class *2025 – 2026*
Kingston University, London (Top-Up via ESU, Colombo)

Pearson BTEC Higher National Diploma in Computing *2022 – 2025*
Esoft Metro Campus, Gampaha

Diploma in Information Technology *2020 – 2021*
BCI Campus, Negombo
